2	Spacer		

Step 1

Note: Prior to installing the electrical bracket, check for adequate clearance for the bracket, plug(s) and wiring. Forming the lower bracket flange prior to installation can help create a tighter fit during installation. Do this by pushing the lower flange against the ground until it creates a snug fit around the receiver tube. See Detail A.

Attach the 6- or 7-way plug and your 4or 5-way flat using the provided hardware, as shown. Tighten the hardware evenly until snug. Overtightening the hardware can cause the front of the bracket to bow or the hardware to break.

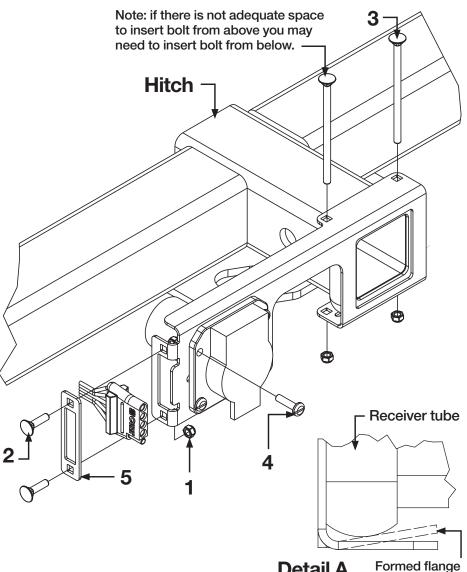

Step 2

Slide the electrical bracket over the receiver tube collar.

Note: Use the supplied spacers (#6) as needed if there is a larger gap between the collar and the electrical bracket.

Step 3

Secure the electrical bracket to the receiver tube collar using the provided hardware, as shown.
