

# MouseBlocker PRO Model Instruction Manual

Congratulations on your purchase of the most powerful rodent deterrent on the market today designed for 12V applications. The MouseBlocker PRO was designed after years of work and testing to design the best and most advanced MouseBlocker yet.

## Features:

The MouseBlocker PRO has 3 modes and is controlled by simply pressing the small mode button on the back of the unit.

Unit is OFF

- Press Once for setting 1 (80db)
- Press again to go to level 2 (90db)
- Press a 3rd time to reach level 3 (105db)
- Press again the unit will cycle to off.

The MouseBlocker Unit also has 2 strobing LED lights on either side of the speaker. These lights when flashing towards the area you are trying to protect will add a 2nd deterrent in our attempt to make the area uncomfortable for the rodents to nest. No nesting, no chewing.

Built into the MouseBlocker PRO is our NEW Microcomputer that constantly monitors the battery voltage of the vehicle. How does this work?

- When the battery voltage in the vehicle drops below 11V the MouseBlocker will automatically turn itself off saving the battery and still allowing you to start the car when you return.
- When the vehicle is started the onboard computer recognizes charging voltage and will also automatically shut off. No worry of flashing lights while the vehicle is running.

**Operation LEDs:** During operation there is an LED light on the back of the unit beside the Mode button that will change between red and green. This is normal as it is illuminating different colors between the 2 different Ultrasonic frequencies being emitted at that time (red for one, green for the second).

## Installation:

The MouseBlocker PRO is just a simple 2 wire hookup.

- Red – Positive
- Black – Negative

Mount the unit with the white flashing lights towards the engine compartment or largest open space however works for your specific application. Many use the Zip Ties provided but the unit can be also screwed to a mounting surface if you would like.

**Note:** Do not direct the white lights at any insulation or padding. Do not face the lights up towards the hood either as this padding will not reflect the sounds emitted by the Mouseblocker PRO.

**NOTE:** When the unit is set to level 3 the sounds can be heard by household pets like cats and dogs. This will not harm the animals in any way it will just keep them away from the vehicle. Settings 1 and 2 you will find effective on Mice, Rats, Chipmunks, Squirrels and weasels.
